**CME Clinical Content Validation Policy:** All recommendations for patient care are based on current science, evidence, and clinical reasoning, while giving a fair and balanced view of diagnostic and therapeutic options. All scientific research referred to, reported, or used in accredited education in support or justification of a patient care recommendation conform to the generally accepted standards of experimental design, data collection, analysis, and interpretation. Although accredited continuing education is an appropriate place to discuss, debate, and explore new and evolving topics, these areas are clearly identified as such within the program and individual presentations. **PMAC and its joint providership FEUDNRSMAF do not** advocate topics for, nor promote, practices that are not, or not yet, adequately based on current science, evidence, and clinical reasoning. Furthermore, **PMAC and FEUDNRSMAF do not** advocate for unscientific approaches to diagnosis or therapy, or if the education promotes recommendations, treatment, or manners of practicing healthcare that are determined to have risks or dangers that outweigh the benefits or are known to be ineffective in the treatment of patients. **Educational Content must be fair and balanced and supports safe, effective patient care. This must follow the guidelines and standards of the ACCME as to accreditation.**
